- Medicare Supplements are sometimes referred to as Medigap Plans. These plans are designed to pay the 20% gap left after Medicare pays 80%.
- Medicare Prescription Drug Plans cover some of your prescription drug costs. You are responsible for co-pays and any costs for drugs not covered by Medicare.
- Cancer treatments are expensive and may not all be covered by Medicare. Your doctor may recommend you get treatments more often than Medicare covers, or recommend a service that Medicare does not cover. Cancer Insurance will pay you up to \$60,000 when you are diagnosed with life threatening cancer, so you can get the treatment you need to get well.
- Dental, Vision, Hearing insurance provides coverage in all three areas. This helps reduce the costs of your routine exams, x-rays and procedures for all three services.
